SharePoint Services

ISHIR provides end-to-end Microsoft SharePoint consulting services to companies with unique business requirements, from basic configuration (WSS or SharePoint Online) and deployment of Microsoft Office SharePoint Server (MOSS), to developing enterprise-wide portal which integrates with a number of disparate packaged and custom applications.

Our professional team of SharePoint experts use industry best practices to ensure our SharePoint solution meets your enterprise portal needs while allowing your IT resources to remain focused on your company's core business.

ISHIR is a Microsoft Gold Partner with competencies in developing solutions using Microsoft SharePoint Platform and associated Microsoft and third-party technologies.

Consulting Services
Our SharePoint consulting team helps analyze and define your unique business requirements, put together solutions leveraging SharePoint technology, thus maximizing your investments.

SharePoint Design & Branding Services
Our experienced design team creates rich engaging experiences in SharePoint to improve adoption. This includes customizing themes and templates, master page layout, CSS, site definitions, Microsoft SilverLight, administer controls for personalization, etc.

Installation, Customization, Deployment Services
We help deploy SharePoint solutions using QuickStart services, fully configured, leveraging 'out of box' features to adapt to your specific business needs.

Enterprise Content Management & Search Services
We help device a method to efficiently store and rapidly retrieve content within an enterprise.

Workflow & Collaboration Solutions
We create workflows and enterprise collaboration solutions using common, standardized, repeatable business processes by capturing data using Microsoft InfoPath forms and automating it through workflows created using Microsoft SharePoint Designer and third-party tools.

Custom SharePoint Development
We specialize in developing custom solutions that integrate with or are built on SharePoint platform. This includes integrating disparate systems/BDC, developing custom web parts, dashboards, reports/business intelligence, etc.

Migration Services
A sound understanding of SharePoint object model and database schema helps us extract data and migrate you to the latest version of SharePoint.

Support & Administration Services
We offer ongoing maintenance, enhancement and support through remote and onsite services.
